### SC5-FESTIVAL • CompactPCI® Serial CPU Card

Intel® Mobile Workstation Processor  
XEON® E3 v6 Family

Document No. 8459 • 17 June 2021

## General

The SC5-FESTIVAL is a rich featured high performance 4HP/3U CompactPCI® Serial CPU board, equipped with an Intel® Xeon® E3 family mobile workstation processor (Kaby Lake Halo platform) for demanding applications. For scalability, the SC5-FESTIVAL is also available with a 7<sup>th</sup> Generation Intel® Core™ processor.

The SC5-FESTIVAL front panel is provided with two Gigabit Ethernet jacks, two USB 3.0 receptacles, and two DisplayPort connectors. In addition, up to two USB Type-C front panel receptacles are available as an option, one of them usable alternatively as (third) DisplayPort.

On-board mass-storage solutions are based on low profile mezzanine expansion cards, which accommodate up to two M.2 style SSD modules. One of the M.2 sockets is suitable for a fast NVMe (PCIe Gen3 x 4) module, and the other for a low cost SATA type M.2.

The SC5-FESTIVAL is equipped with up to 32GB DDR4 RAM with ECC support. Up to 16GB memory-down are provided for rugged applications, and another 16GB are available via the DDR4 ECC SO-DIMM socket.

The powerful Xeon® E3-1500 v6 series processor is accompanied by the CM238 mobile PCH, for a maximum of high speed I/O resources (e.g. PCI Express®, SATA, USB). Thus, 22 PCIe lanes are available for backplane use, and up to 8 lanes for local mezzanine expansion.

The SC5-FESTIVAL is provided with an on-board SATA hardware RAID controller, enabling high-capacity mass storage solutions across the CompactPCI® Serial backplane.

As an option, up to eight Gigabit Ethernet Ports are available via the backplane connector P6 (S80-P6 low profile mezzanine expansion card).

## CompactPCI® Serial

While mechanically compliant to CompactPCI® Classic, CompactPCI® Serial (PICMG® CPCIS.0) defines a completely new card slot, based on PCI Express®, SATA, Gigabit Ethernet and USB serial data lines. Up to 6 high-speed backplane connectors P1 - P6 are provided on a system slot controller such as the SC5-FESTIVAL, which can be considered as a root hub with respect to most signal lines. A passive backplane is used for distribution of a defined subset of I/O channels from the system slot to each of up to eight peripheral slots in a CompactPCI® Serial system.

Most CompactPCI® Serial peripheral slot cards require only the backplane connector P1, which comprises PCIe, SATA and USB signals, resulting in a concise and inexpensive peripheral board design. More powerful peripheral cards profit from two so called Fat Pipe slots (PCIe x 8).

The SC5-FESTIVAL is a native CompactPCI® Serial CPU card, suitable for usage in a pure CPCI Serial environment. Due to its generous backplane capabilities (22 x PCI Express® Gen3, 8 x USB, 6 x SATA/RAID 6G, 8 x GbE), very powerful industrial systems can be built.

For backplanes with a lower number of peripheral card slots (PER#), resources shown above get lost on missing slots. Not so however regarding SATA - these channels move towards the SC5-FESTIVAL system slot. A backplane with six peripheral slots e.g. would provide SATA (RAID) on both fat pipe peripheral slots.

## Local Expansion

The SC5-FESTIVAL is equipped with a set of high-speed local expansion interface connectors, which can be optionally used to attach either a low profile mezzanine module (fits into the 4HP front panel envelope) or a side board for an 8HP or even 12HP assembly in total.

The connectors HSE1 and HSE2 are high speed connectors, as required for PCI Express® Gen3 and SATA 6G. The socket EXP is used as a legacy interface (e.g. HD Audio, LPC) and not required for many mezzanine modules. All connectors allow board-to-board heights of 9.5mm (C4\* series), 10.0mm (S20, S40), 10.8mm (S60, S80), and 18.7mm (SC\* side cards 8HP assembly).

HSE1 can be configured for either 4 x PCIe or 4 x SATA, or 2 x PCIe and 2 x SATA, thanks to the flexible HSIO channels of the CM238 PCH. When HSE1 has been setup for SATA, the SC5-FESTIVAL can be combined e.g. with low cost SSD mass storage mezzanine modules such as the C47-MSATA (dual mSATA carrier) or C48-M2 (dual M.2 SATA sockets). For high performance NVMe based SSD mezzanine modules (S20/40/80), HSE1 must be configured as PCIe x 4.

HSE2 is assigned to 4 x PCIe, and in addition the 3<sup>rd</sup> DisplayPort video output. While S20 and S60 get along with HSE1 only, the S40 and S80 mezzanine modules depend on both HSE1 and HSE2, for additional I/O.
